    DataSource dataSource;

    NamedParameterJdbcTemplate namedParameterJdbcTemplate;

    JdbcTemplate jdbcTemplate;

    @Autowired

    public void setDataSource(DataSource dataSource) {

        namedParameterJdbcTemplate=new
NamedParameterJdbcTemplate(dataSource);

        jdbcTemplate=new JdbcTemplate(dataSource);
    }
}

```

```

    }

    // registering the user

    int registerUser(UserDetails user) {

        String qry="insert into userinfo values
(:id,:name,:email,:password)";

        MapSqlParameterSource source=new
        MapSqlParameterSource()

            .addValue("id", user.getId())
            .addValue("name", user.getName())
            .addValue("email", user.getEmail())
            .addValue("password", user.getPassword());

        return namedParameterJdbcTemplate.update(qry, source);

    }

```

```

Float depositing(Float depositBalance, Integer id) {

    String qry="select balance from moneydetails where id=";

    MapSqlParameterSource source=new MapSqlParameterSource()

        .addValue("id", id);

    Float
    balance=jdbcTemplate.queryForObject(qry,Float.class,source);
}

```

```
        return balance+depositBalance;
    }

}
```

## App.java

```
package com.bankapplication;

import java.util.Scanner;

import org.springframework.context.support.ClassPathXmlApplicationContext;

/**
 * Hello world!
 *
 */
public class App {

    public static void main( String[] args )
    {
        System.out.println( "Hello World!" );
    }
}
```

```
ClassPathXmlApplicationContext context=new  
ClassPathXmlApplicationContext("config.xml");
```

```
Operations  
operations=context.getBean("operations",Operations.class);
```

```
String signing;
```

```
Scanner sc=new Scanner(System.in);
```

```
String runOrStop;
```

```
Integer chocieOfOperation;
```

```
do {
```

```
    System.out.println("Please enter signup for adding and  
signin for signing in");
```

```
    signing=sc.next();
```

```
    if(signing.equalsIgnoreCase("signup")) {
```

```
        System.out.println("Please neter name email  
password");
```

```
        String name=sc.next();
```

```
        String email=sc.next();
```

```
        String password=sc.next();
```

```
        Integer id=sc.nextInt();
```

```
        operations.registerUser(new  
UserDetails(id,name,email,password));
```

```

    }

    if(signing.equalsIgnoreCase("signin")) {

        System.out.println("Please enter your choice");
        chocieOfOperation=sc.nextInt();
        switch(chocieOfOperation) {

            case 1:
                System.out.println("Deposting the money");
                Float depositbalance=sc.nextFloat();
                Integer id=sc.nextInt();

                System.out.println("updated Balance:
"+operations.depositing(depositbalance,id));

            }
        }

        System.out.println("Enter y to run and anyother key to
stop");

        runOrStop=sc.next();

    }while(runOrStop.equalsIgnoreCase("y"));
}
}

```

## Database Tables

### Userinfo table;

The screenshot shows the MySQL Workbench Table Designer interface for a table named 'userinfo' in the 'bankapplication' schema. The table is using the 'InnoDB' engine and 'utf8mb4' charset/collation. The table structure is defined by the following columns:

Column Name	Datatype	PK	NN	UQ	B	UN	ZF	AI	G	Default/Expression
id	INT	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
name	VARCHAR(100)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	NULL
email	VARCHAR(100)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	NULL
password	VARCHAR(100)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	NULL

The 'password' column is currently selected, and its properties are shown in the right-hand pane:

- Column Name: password
- Data Type: VARCHAR(100)
- Default: NULL
- Storage: ☐ Virtual ☐ Stored
- ☐ Primary Key ☐ Not Null ☐ Unique
- ☐ Binary ☐ Unsigned ☐ Zero Fill
- ☐ Auto Increment ☐ Generated

The bottom of the window shows tabs for 'Columns', 'Indexes', 'Foreign Keys', 'Triggers', 'Partitioning', and 'Options'. The 'Columns' tab is active. The 'Apply' and 'Revert' buttons are visible at the bottom right.
